

NEXOMATE — What It Is & How It Works

A Plain-English Explanation | Based on v1.0 Technical Document

What Is Nexomate?

Nexomate is a smart software system that helps businesses — mainly solar installation companies and interior design firms — automatically handle people who show interest in their services (called "leads").

When someone fills out a form, clicks a Facebook ad, or sends a WhatsApp message saying "I'm interested," Nexomate takes over. It replies instantly, asks a few smart questions, figures out how serious the person is, and either books them for a meeting or follows up automatically over the coming days — all without a human needing to do anything.

The big idea: Build the system once, then plug in any client's details (their name, their questions, their rules) and it works for them. No rebuilding from scratch every time.

How Does a Lead Move Through the System?

Here's what happens from the moment someone expresses interest:

1. **Someone contacts the business** — through a website form, Facebook ad, Google ad, WhatsApp, or even a phone call.
2. **The system receives it instantly** — like a receptionist who never sleeps and never misses a message.
3. **It checks if it's a real, new enquiry** — not a duplicate or spam.
4. **It detects what language the person wrote in** — and responds in the same language.
5. **An AI sends an immediate, friendly reply** — the person never waits more than seconds to hear back.
6. **The AI asks 3–4 smart questions** — tailored to the industry (e.g. for solar: "Do you own your home?" and "What's your monthly electricity bill?").
7. **Based on the answers, the lead is scored:**
 -  **HOT** — Ready to buy, serious, meets all criteria → Book a meeting immediately
 -  **WARM** — Interested but not fully decided → Follow up over the next week

-  **COLD** — Just browsing or not the right fit yet → Send helpful content over weeks
-  **Disqualified** — Not a match at all → Archive and notify the sales team

8. **Everything gets saved** into a contact management system (called a CRM) so the business can see every lead's history.

What Happens After Scoring?

Hot Leads

They get an immediate message with a link to book a meeting. The goal is to get them on a call or appointment as fast as possible.

Warm Leads — Follow-Up Over 7 Days

- **Right away:** Instant AI reply + qualification questions
- **2 hours later:** A helpful follow-up message (if they haven't replied)
- **Next day:** A customer success story or testimonial
- **Day 3:** A direct booking link with a gentle nudge
- **Day 7:** One final attempt — after this they move to the long-term list

Cold Leads — Slow Nurture Over Weeks

- **Week 1:** Useful educational content (e.g. solar savings calculator)
- **Week 2:** Reviews and examples of past work
- **Week 3:** Gentle check-in ("Still thinking about solar?")
- **Week 4+:** Monthly newsletter to stay on their radar

What Tools Does Nexomate Use?

Think of these like the different departments in a company:

What It Does	Tool Used	Simple Explanation
Runs all the automations	n8n	The brain — connects everything and decides what happens next
Writes the AI replies	OpenAI (ChatGPT)	The AI that writes smart, human-like messages
Stores contact records	GoHighLevel / HubSpot	Like a digital rolodex for all leads

	HubSpot	
Sends emails	SendGrid	The email delivery service
Sends text messages	Twilio	The SMS service
Sends WhatsApp messages	WhatsApp Business API	For markets like India, Europe, Latin America
Books appointments	SavvyCal / Calendly	Lets leads pick a meeting time themselves
Makes AI phone calls	Bland AI	An AI that can actually call leads and have a conversation
Stores data	PostgreSQL (via Supabase)	A secure filing cabinet for all records
Alerts when something breaks	Slack	Sends a team message if anything goes wrong

How Does the AI Know What to Say?

Each client gets a customised AI "personality." For example, for a solar company, the AI is told:

- Who it represents
- What questions to ask
- What makes a lead HOT vs COLD
- What tone to use (friendly, professional, concise)
- Always reply in the same language the customer used

The AI's response is always structured — it doesn't just chat freely. It returns the reply text, the lead score, the reason for that score, and what to do next — all in a format the system can act on automatically.

Is Customer Data Safe?

Yes — the system is built with privacy laws in mind across different countries:

- **Europe & UK (GDPR):** Customers must give permission before being contacted. They can ask to be deleted at any time.
- **California (CCPA):** Customers can opt out. All communications include a privacy notice.
- **US emails (CAN-SPAM):** Every email has an easy unsubscribe link.

- **Canada (CASL):** Requires customers to confirm twice before they're added to any list.
- **Brazil (LGPD):** Same rules as Europe applied automatically.

Other safety measures include encrypted passwords, secure connections (HTTPS), rate limiting to block spam attacks, and regular security check-ups.

Where Does the System Run?

It runs on a rented server (like a powerful computer in a data centre). The software is packaged in "containers" — think of them as sealed boxes that each do one specific job and don't interfere with each other.

If anything breaks, the system automatically sends an alert to a Slack channel so the team knows within seconds. If 3 or more errors happen within 10 minutes, it escalates to whoever is on call.

Can It Handle Multiple Clients?

Yes — that's the core design. Nexomate runs one central system, and each client just has their own settings plugged in:

- Client A: Solar company in Texas, English
- Client B: Solar company in Spain, Spanish
- Client C: Interior design firm in the UK, English

They all run on the same platform, but each gets their own AI personality, questions, scoring rules, and communication preferences.

How Many Clients Can It Handle?

Stage	Number of Clients	Monthly Cost to Run
Starting out	1–3 clients	~\$50–80/month
Growing	4–10 clients	~\$150–200/month
Scaling up	10–30 clients	~\$400–600/month
Enterprise	30+ clients	Custom pricing

What Does It Cost to Run Per Client?

What You're Paying For	Approx. Monthly Cost
Server hosting	\$12–24 (shared)
AI (writing messages)	\$20–50
Email sending	~\$20
Text messages	\$15–30
WhatsApp messages	\$10–20
Contact management (CRM)	\$97–297
Database storage	\$25 (shared)
AI phone calls (optional)	\$20–50
Total running cost	~\$120–250/month

Suggested pricing to clients: \$1,500 setup fee + \$500–800/month ongoing.

What's the Build Timeline?

Phase	Weeks	What Gets Built
Foundation	1–2	Core system, basic AI replies, email/SMS, first CRM connection
Intelligence	3–4	Qualification questions, HOT/WARM/COLD scoring, follow-up sequences, appointment booking, error alerts
Scale	5–6	Industry templates, multi-language, privacy compliance, client onboarding
Premium	7–8	AI phone calls, WhatsApp, post-sale automation, advanced analytics

Phase 1 (Foundation) is already complete . The rest is in progress.

What Could Go Wrong — and What's the Plan?

Risk	How Serious	Plan
The automation stops working	High	Automatic alerts, backup triggers, manual fallback

The AI service goes down	Medium	Switch to a backup AI automatically
The CRM changes its system	Medium	Built with a layer that absorbs changes
A data breach	Critical	Encryption, access controls, regular audits
A client leaves	Medium	Monthly value reports to show results
Only one person knows how to run it	High	Full documentation + self-service client onboarding

Key Decisions Still to Make

Decision	Options	Current Leaning
Which CRM to start with	GoHighLevel vs HubSpot vs Pipedrive	GoHighLevel (best fit for solar in the US)
Where to host	Own server vs cloud service	Own server (cheaper + more control for now)
Which AI to use primarily	ChatGPT vs Claude vs Gemini	ChatGPT as primary, Claude as backup
AI phone calls: now or later	Phase 1 or Phase 2	Phase 2 — it's a premium add-on, not essential at launch
Languages: from day 1 or later	Day 1 or on demand	Spanish from day 1 (US + Spain solar market)
How to charge clients	One-time vs monthly	Both: setup fee + monthly retainer
Which market to enter first	US, UK, or Australia	US solar — highest paying, English-speaking

Backup & Recovery

- The database is backed up automatically every day and stored securely off-site.
- If something catastrophic happens, the system can be restored within 4 hours.
- All automation workflows are version-controlled (saved history of every change).
